Our e-commerce sites use a process called Secure Sockets Layer (SSL) technology. We use industry standard 128 bit encryption. SSL locks all critical information passed from you to us, such as payment information, in an encrypted envelope, making it extremely difficult for this information to be intercepted. We then send this information via the same method to the PayFlow gateway for processing. Catapult Smallprint does not retain Credit Card details, these details are held on PayFlow/PayPal's systems. For further information on PayPal purchase protection please go to paypal.com.au

Catapult Smallprint will debit your credit card at the time you place the order.

We will not add a surcharge for a credit card payment from our accepted credit cards, currently VISA and Mastercard, but accept no liability for any other charges your credit card provider may impose.

If we are unable to successfully process your credit card payment for your order that is accepted by us, then we may cancel your order or contact you for further information.
